

STUDENT COMPLAINT MANAGEMENT SYSTEM

➤ Project Name

Student Complaint Management System

➤ Background

Universities receive different types of complaints from students related to classrooms, laboratories, teachers, facilities, cleanliness, transportation, and other university services. In many cases, complaints are submitted verbally or through informal methods, which can make it difficult to maintain proper records and track their progress.

The **Student Complaint Management System** is proposed as a computerized solution to make the complaint-handling process more organized and efficient. The system will provide students with an online platform where they can submit complaints and track their status using a unique Complaint ID.

Administrators will be able to receive, manage, categorize, and assign complaints to the relevant staff or department. Staff members will be able to handle assigned complaints and update their status. The system will help the university maintain centralized complaint records and improve the overall management of student complaints.

➤ Objectives

The main objectives of the Student Complaint Management System are:

- To provide students with an easy and organized way to submit complaints.
- To maintain a centralized record of all student complaints.
- To generate a unique Complaint ID for each submitted complaint.
- To allow students to track the status of their complaints.
- To allow administrators to manage and assign complaints to relevant staff or departments.
- To allow staff members to update the progress and resolution of complaints.
- To reduce paperwork and manual complaint handling.
- To improve communication between students and university administration.
- To maintain accurate and organized complaint records.
- To provide useful complaint reports for university management.

➤ Stakeholders

The Student Complaint Management System involves the following major stakeholders:

1.Student

Students are the primary users of the system. They can register/login, submit complaints, receive a Complaint ID, and track the status of their complaints.

2.Administrator

The administrator manages the complaint system. The administrator can view complaints, categorize them, assign them to the relevant department or staff member, and update complaint information.

3.Teacher/Staff

Teachers or staff members receive complaints assigned to them. They review the complaint, take appropriate action, and update its status after the issue has been addressed.

4.Department Head

The Department Head monitors complaints related to the department, reviews their progress, and ensures that important complaints are properly handled.

Stakeholder Summary

Stake holder	Main responsibility
Student	Submit and track complaints
Administrator	Manage and assign complaints
Teacher/Staff	Handle assigned complaints
Department Head	Monitor complaints and their progress

➤ Requirements

Functional Requirements

Functional requirements describe **what the system should do**.

ID	FUNCTIONAL REQUIREMENTS
01	The system shall allow students to register an account.
02	The system shall allow students, administrators, and staff to log in.
03	The system shall allow students to submit complaints.
04	The system shall generate a unique Complaint ID for each complaint
05	The system shall allow students to view their submit complaints.
06	The system shall allow to track complaints status.
07	The administrator shall be able to view and manage complaints.
08	The administrator shall be able to categorize complaints.
09	The administrator shall be able to assign complains to relevant staff or departments.
10	Staff shall be able to view assigned complaints.
11	Staff shall be able to update the status of assigned complaints.
12	Staff shall be able to add a resolution or response to a complaint.
13	The Department Head shall be able to monitor complaints and their progress.
14	The administrator shall be able to search and filter complaints.
15	The system shall allow authorized users to generate complaint reports.
16	Users shall be able to securely log out of the system.

Non-Functional Requirements

Non-functional requirements describe **how well the system should work**.

ID	Non-Functional Requirement
01	Security: The system shall protect user accounts and complaint information from unauthorized access.
02	Usability: The system shall have a simple and user-friendly interface.
03	Performance: The system should respond to user requests efficiently.
04	Reliability: The system should maintain complaint records accurately and consistently.
05	Availability: The system should be available whenever authorized users need to access it.
06	Maintainability: The system should be easy to maintain and update.
07	Scalability: The system should be capable of handling an increasing number of students and complaints.
08	Data Integrity: The system should maintain accurate and consistent data.
09	Privacy: Personal information and complaint details should only be accessible to authorized users.
10	Compatibility: The system should work properly on commonly used web browsers and devices.
